

TravelPower

Automation and integration leading to significant cost savings

If you are creating bookings in your GDS or from a website and they are quality controlled then most transactions do not need any further attention. That is why TravelPower saves you so much time.

Once a booking is completed the whole transaction can be seamlessly processed through to the nominal ledger - including BSP accounting; the automatic application of sometimes complex fee structures and credit and lodge card processing. All the data is immediately available for real time reporting.

TravelPower's main features are:

- ◆ Interfaces to all GDS, Evolvi, Trainline and Conferma
- ◆ Automated BSP and reconciliation
- ◆ Real-time credit card processing and PCI Compliance
- ◆ Comprehensive Fees Module
- ◆ Automated Invoicing and e-invoicing
- ◆ Fully Integrated Accounts
- ◆ Extensive Reporting

With TravelPower it is only the bookings that have genuine problems that your staff need to attend to – if your front office is working well then you just manage by exception.

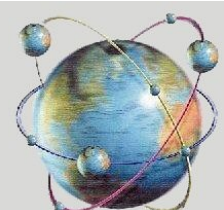

We have many clients already benefitting from our technology – from as few as 2 users to as many as 250.
